Office Action Summary

Application No.

09/594,368

Applicant(s)

LITTLE, HERB A.

Examiner

Tamara Teslovich

Art Unit

2437

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 06/19/09.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-45 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-45 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB/08)
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date: _____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: _____

DETAILED ACTION

This Office Action is in response to Applicant's Remarks filed June 19, 2009.

Claims 1-45 are pending and herein considered.

Response to Amendments and Arguments

Applicant's arguments filed June 19, 2009 have been fully considered but they are not persuasive.

In response to Applicant's first set of remarks concerning Schneier's failure to teach or suggest the production of an ephemeral key pair as disclosed in claim 1, the Examiner respectfully disagrees. Those portions of the reference cited by the Examiner and included in Applicant's remarks specifically teach Schneier's use of ElGamal variants, variants which are known by those skilled in the art to include the production of ephemeral key pairs (col.1 lines 64-65).

In response to Applicant's next set of remarks concerning the Examiner's use of the Perez reference, the Examiner respectfully disagrees with Applicant. While it is true that the Perez memo was authored by Aram Perez and seems to have been particularly targeted to Bob Jueneman, the memo was not only sent out through the ietf-pkix mailing list (*Sender:* owner-ietf-pkix@xxxxxx) but also sent out to the entire PXIX Working Group and archived for all the members to see (*Cc:* ietf-pkix@xxxxxx). It is based upon this widespread distribution and public access that the Examiner has relied upon the August 31, 1998 which predates Applicant's June 23, 1999 priority date.

It is based upon the arguments above in view of the references in their entirety that the Examiner maintains her rejections repeated below.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schneier et al., US Pat 5,956,404 and further in view of Aram Perez' "Digital signature and non-repudiation key usage bits.

Regarding **Claims 1, 16, and 31**, Schneier teaches a public-key encryption process and system for communicating messages between a sender and a receiver comprising the steps of for each message: a) encrypting a plaintext message into a ciphertext message, the encrypting step includes the step of producing an ephemeral key pair that is used to encrypt the plaintext message (see Schneier col.1 lines 28-44); and b) generating a digital signature for the ciphertext message using an ephemeral key pair (see Schneier col.1 lines 45-65); wherein the ephemeral key pair used in the encrypting and generating steps is used for a single message between the sender and the receiver.

Schneier fails to specifically disclose generating a digital signature using the key pair produced in the encrypting step.

Perez discloses using the same keys for encryption and digital signatures.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to include within Schneier the dual pronged use of keys as described in Perez to allow for the repeated use of a key pair saving the time and resources that would normally be required in order to create a new key pair.

Regarding **Claims 2, 17, and 32**, Schneier and Perez teach a public-key encryption process and system wherein the encrypting step uses an El Gamal encryption scheme (see Schneier col.1 lines 45-65).

Regarding **Claim 3**, Schneier and Perez teach a public-key encryption process wherein the step of generating a digital signature comprises generating the digital signature using a Nyberg-Rueppel digital signature scheme; wherein the step of generating the digital signature includes hashing the plaintext message (see Schneier col.1 lines 45-65).

Regarding **Claims 18, and 33**, Perez and Schneier teach a public-key encryption process and system wherein the step of generating a digital signature comprises generating the digital signature using a Nyberg-Rueppel digital signature scheme (see Schneier col.1 lines 45-65).

Regarding **Claims 4, 19, and 34**, Perez and Schneier teach a public-key encryption process and system, wherein the step of producing the ephemeral key pair comprises the steps of generating an encryption ephemeral private key x and calculating an encryption ephemeral public key $X = xG$, where G is a generator (see Schneier col.1 lines 28-44).

Regarding **Claims 5, 20, and 35**, Perez and Schneier teach a public-key encryption process and system for encrypting messages for communication between a sender and a receiver, the process further comprising the steps of,

at the sender,

a) generating a sender private key a ; and

b) calculating a sender public key $A = aG$, where G is a generator,
and at the receiver,
a) generating a receiver private key b ; and
b) calculating a receiver public key $B = bG$,
wherein the sender obtains an authentic copy of the receiver public key B and
the receiver obtains an authentic copy of the sender public key A (see Schneier col.1
lines 28-44).

Regarding **Claims 6, 21, and 36**, Schneier and Perez teach a public-key
encryption process and system, wherein the step of producing the ephemeral key pair
comprises the steps of generating an encryption ephemeral private key x and
calculating an encryption ephemeral public key $X = xG$ (see Schneier col.1 lines 28-44).

Regarding **Claims 7, 22, and 37**, Perez and Schneier teach a public-key
encryption process and system, further comprising the steps of, at the sender,
generating a secret key $K = xB$ and encrypting a plaintext message using the secret key
 K to generate a ciphertext message (see Schneier col.1 lines 28-44).

Regarding **Claims 8, 23, and 38**, Perez and Schneier teach a public-key
encryption process and system, further comprising the steps of, at the sender, using the
encryption private key x as a signature ephemeral private key and using the encryption
ephemeral public key X as a signature ephemeral public key to generate a digital
signature (see Schneier col.1 lines 45-65).

Regarding **Claims 9, 24 and 39**, Perez and Schneier teach a public-key
encryption process and system, wherein the digital signature comprises a first value r

and a second value s , the process further comprising the step of, at the sender, transmitting the encryption ephemeral public key X , the ciphertext message and the second value s of the digital signature to the receiver (see Schneier col.1 lines 45-65).

Regarding **Claims 10, 25, and 40**, Perez and Schneier teach a public-key encryption process and system, further comprising the steps of, at the receiver, generating the secret key $K = bX = bxG = xbG = xB$, decrypting the transmitted ciphertext message using the generated secret key K , calculating the first value r of the digital signature using the decrypted message and the transmitted encryption ephemeral public key X and validating the digital signature based on the calculated first value r and the transmitted second value s (see Schneier col.1 lines 45-65).

Regarding **Claim 11**, Perez and Schneier teach a the public-key encryption process of Claim 1, wherein at least a two-stage public-key encryption process is used; wherein the first stage includes key establishment and the second stage includes encryption/decryption; wherein said steps (a) and (b) are performed during the second stage of encryption (see Schneier col.1 lines 45-65).

Regarding **Claims 12-15, 26-30 and 41-45**, Perez and Schneier teach a public-key encryption process and system and its implementation in wireless hand-held communication devices within a communication system (see Schneier col.5 lines 8-40).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tamara Teslovich whose telephone number is (571) 272-4241. The examiner can normally be reached on Mon-Fri 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Emmanuel Moise can be reached on (571) 272-3865. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
